Ziki: Show Me Only What Needs Me

INTENT BRIEF · HNG 15 WEEK 5, TASK 1 (HUMAN-AGENT INTERACTION)

Author: Abuchi Collins Nwajagu

Lens: The Operator · **Date:** Week 5-7, 2026

> **The Change in One Sentence:** Ziki's landing screen should answer *"does anything need me right now?"* in under two seconds, by showing one decision card at a time instead of a list of issues to manage.

THE BRIEF (7-LINE TEMPLATE)

WHO	An operator checking Ziki a few times daily. Agents build autonomously; the operator owns outcomes.
INTENT	Know the factory is running smoothly, and clear whatever is waiting on human input immediately.
EMOTION	Quiet dread: *"something broke while I was away,"* or *"an agent has been blocked waiting for days."*
DECISION	Exactly one: *Does anything need me right now?* If yes, approve or decline it.
OLD UI	Opens with 4 worker stat cards, a 7-column issue list, and idle agents far below the fold. Blocked decisions are buried 4 tabs deep in `Product > Issues > Inbox`.
CHANGE	Landing screen surfaces **one decision card at a time** (<8-word headline, asking agent, impact, diff, 2 buttons). Lower ideas are pre-ranked into the queue (`+45 ranked`). Factory strip (`111 of 264 done`), 10s undo, calm state: *"Nothing needs you."*
AI/HUMAN	Agents triage, fix, and auto-merge low-risk code; operator approves direction, PRs, and spending; failed runs escalate with 1-tap rollback.

WHY TODAY'S ZIKI FAILS THAT DECISION

1. **Treats the human as the worker, not the operator:** Opens on Points, Created (12), Assigned (23), Resolved (89), and 7-column table (`Votes | Issue | Type | Priority | Status | Stage | Reported`), assuming manual ticket editing.
2. **Factory status is buried:** Agents sit far below the fold, all labeled `Idle / Standing by`. First screen omits agent pipeline status.
3. **Decisions are buried behind ticket lists:** Decisions live inside `Product > Issues > Inbox` next to 6 filter counters (`Open 123, Done 111, Auto Merge 7, All 264`).
4. **False calm hides pending work:** Lands on `Need your input (0)` saying *"Nothing here"* with badge `0`, while `New ideas (2)` and `Drafted ideas (46)` sit unattended.
5. **The read-a-paragraph problem:** Inbox opens with an explainer paragraph: *"How the Inbox works..."* Screens requiring paragraphs fail the 2-second rule.

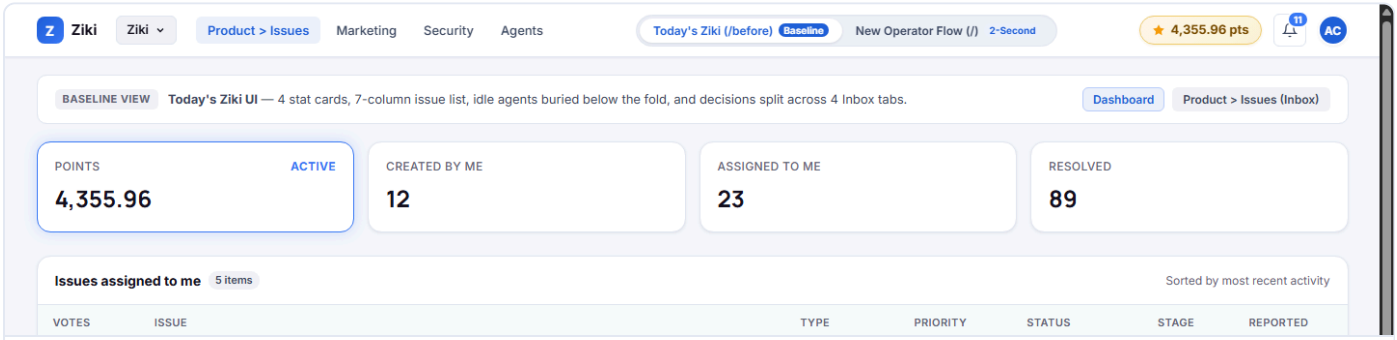

Figure 1: Baseline Today's Ziki (/before) — 4 stat cards, 7-column issue list, idle agents below fold, and 4-tab Inbox. Verified 1440px Baseline

WHAT I CHANGED: THE 2-SECOND OPERATOR COCKPIT

1. One Decision Card at a Time

Headline <8 words (e.g. *"Merge branch fix/1294 into production?"*), asking agent badge, consequence line, CI diff box, and 2 tactile buttons with single-key shortcuts (`A/Enter` vs `D/Esc`).

2. Unified Agent-Ranked Queue

Merges the 4 disparate Inbox tabs into one stream. Operator sees top 3 critical cards and `+45 pre-ranked by agents`, removing manual triage fatigue.

3. Factory Progress Strip

Headline strip: `● 111 of 264 issues shipped (42%) · 5 agents active · Auto Merge active (7)`, keeping factory pipeline telemetry front and center.

4. 10-Second Undo Window & Calm State

Actions trigger a 10s undo progress bar (`U` key). Once queue is cleared, displays: *"Nothing needs you. Next checkpoint in 4h."*

PROPOSED BOUNDARY: AGENT AND HUMAN

BOUNDARY TIER	AGENT ACTS ALONE	HUMAN OPERATOR DECIDES	SYSTEM ESCALATES TO HUMAN
Issue Triage	Ingests bugs, deduplicates, verifies repro steps, assigns severity.	Selects milestone focus and approves new drafted feature ideas.	Ambiguous bug reports or conflicting spec requirements.
Code Implementation	Writes unit tests, writes code fix on dev branch, runs CI test suite.	Approves architectural changes and production PR merges.	Test failure loops, merge conflicts, or CI timeouts.
Deployment & Rollback	Auto-merges low-risk routine changes (`Auto Merge` status).	Sets auto-merge rules and authorizes spend/budget thresholds.	Staging/production build failure with one-tap rollback card.

WHAT I DELIBERATELY LEFT ALONE

Strict Design Token Preservation: Zero new colors or arbitrary dark modes. Built strictly using Ziki's production CSS tokens: pale blue-grey background (`#f5f7fc`), crisp white tiles (`#ffffff`), electric blue accents (`#1f5fd9` / `#3978f6`), pastel status chips (`#fdf3d7` warning, `#e3f6ec` success, `#fde8e4` danger), and Inter typography. Data model, points engine (`4,355.96 pts`), workspace picker (`Ziki`), and navigation are fully preserved. No chat boxes or complex issue filters.

HOW WE KNOW IT WORKS (EVALUATION METRICS)

‹ 2s	‹ 5s	› 85%	‹ 5%
COMPREHENSION SPEED	LANDING TO ACTION	DECIDED WITHOUT LOGS	UNDO INVOCATION RATE
